

Chronic Neck Pain

Condition

A 57- year -old female, presented with chronic neck pain that had been getting worse over the last few years. The patient was quite active and lead a healthy lifestyle, but found that the neck pain had become almost constant regardless of activity level.

Medical Assessment

The patient had not found any treatment methods that provided relief before hearing about our clinic. Cervical radiographs revealed a reversal of the cervical curve. This malpositioning of the bones of the neck was causing the joints to show significant signs of degeneration.

Treatment Suggestion

Our suggested clinical plan is to address the malalignment of the patients' spine through gently applying the KKT[®] treatment device.

Results of Treatment

After two weeks of KKT[®], the patient began to notice that her neck felt different; she noticed less pain and reduced stiffness. Physical examination a few weeks later, revealed increased cervical range of motion. Subsequent radiographs revealed that the cervical curve had moved from being kyphotic to straight, with some minimal lordosis. The patient is continuing with care to promote further restoration of the cervical lordosis.

KKT[®] Tomorrow's healthcare, Today!

So come in today for a consultation and take the first step to feeling great again. Because life won't wait and neither should you!

Get back to health and get back to being you again.
